GERMANY - The sea is a gold mine depending on where you look. Normally one liter of sea water contains only a few billionths of a gram of gold. But now researchers have discovered from a bubbling spring on the Icelandic Reykjanes Peninsula. It contains gold whose concentration is half a million times higher than in normal seawater.

### Researchers Fishing Pure Gold from Seawater - ScienceNewsHub

Gold is the heaviest material in a creek or river. Because of this, the gold makes its way beneath the sand and sits on the bedrock. It then gets trapped there. A metal detector will help you find the location of the gold.
