[KERNEL][Permissive] Mina kernel for Galaxy ... - Pg. 4 ...

The hard way is to install a kernel module to add support for the TFT display that will make the console appear on the display. This is cute because you can have any program print text or draw to the framebuffer (or, say, with pygame) and Linux will take care of displaying it for you. If you don't need the console or direct framebuffer access ...

1.14" 240x135 Kernel Module Install | Adafruit Mini PiTFT ...

Just to be clear, this is a kernel that this thread is about. If your device is not a J700t (T-Mobile) or J700t1 (metro pcs) then no. It should not work for you. And not trying to sound condescending at all here, but a kernel is the software that your Rom interacts with the hardware.

[KERNEL][Permissive] Mina kernel for Galaxy ... - Pg. 2 ...

some of your declared gems (Gemfile.lock should tell which one) depends on the unf_ext gem which uses native C extensions. you will need to somehow avoid that gem (e.g. with a platform: :mri just like you did with others) with JRuby. details depend on the problematic gem and how much of it you need, e.g. if it's only for development simply move it to a group :development and bundle --without ...
